MX Calendar Activation Code License: The license of the MX Calendar extension for Dreamweaver is valid for one year from the date of purchase. What can i do to get buy this version? First of all thank you very much for provide this valuable extensions! I'm using Dreamweaver cs3 (as you see in the website... there is only the trial version for download) and i've bought MX Calendar, but it looks like the trial version (which i downloaded) isn't valid for me to use. I've tried: 1) Uninstall Dreamweaver CS3 and buy again MX Calendar, in the e-shop of Dreamweaver they ask to create a new product with trial for 30 days but I have to wait to register on their new version, without registering on their old one (without registering an account i can't buy MX Calendar and i can't use it). 2) I can't install MX Calendar on my computer, it looks like i need a upgrade of Dreamweaver CS3 for version higher than cs3... I don't know if this upgrade is available, i 3a67dffec

MX Calendar

WebCalendar is a basic Eclipse Kepler web calendar plugin developed with a focus on providing a simple user experience with a widget that easily integrates into almost any web application. WebCalendar has a two-pane view, a calendar display, and a details view, where events can be created, edited, deleted, and there are links to each event's content (additional information such as descriptions, due dates, and so on). There are many actions users can perform, such as creating new events, updating existing events, editing existing events, going to the details view, and connecting events to existing contacts. The calendar is designed for web applications and web forms, so there are no installation or deployment steps required. See the full feature list below: Features: - Web based and java applet based - Automatically picked up and added to the OpenDrop's calendar widget in Eclipse - Two pane view: calendar display and details display - An open door to all the data - Support for DaysOfWeek, WeeksOfMonths, and MonthsOfYears - Search - Multiple views to show single day, calendar, week, month, year - Place an event in the same position every day - Filter by day of week - Set start and end times - Change week and month from the View menu - Edit existing event, including label, description, and more - Edit event or set details like color, image, and more - Delete an event and update the archive - Connect an event to a contact in the workspace - Encode and decode event creation/editing/deletion action - View or go to the details view for details of the event - Last month view - Last week view - Last day view - Single event view - Zoom in/out of the calendar - Calendar display mode with style - Show recurring events as grayed out - Option to open events in a separate browser tab - With an up and down arrow, show or hide the year, month, week, and day views - Add contacts by name or email - Show event info on mouseover - Ability to turn off and change colors - Add a status or location - Add a description - Add or edit a start or end time - Add a location - Add a label - Add a priority - Add or edit a duration - Add a note or comment - Set icon -
