Q: Exclude certain environment variables from request.environ Is it possible to exclude specific environment variables from request.environ? I have a handler that requires the value of another environment variable, but don't want it to be read in, to reduce potential security issues. A: As @codebreaker already pointed out, the general solution is to set the environment variable you don't want to read via your WSGI application as an environment variable or in your config (e.g..env file). In the standard way, Django creates the environment variables from the request. environ dictionary. See request.environ.keys. Any other approach would mean you have to change how Django creates and reads your environment variables. For example, that might include: Doing something different in the WSGI environment dictionary, such as setting it in your app. Doing something different to the process of setting the environment variables, such as setting them as environment variables on a cron job

Album Songs Of Rich Kids Album Songs Of Rich Kids Three young women -- Harlan, Harriette, and Rainy (the three Allie principals, respectively) -- are bored out of their minds in Palm Springs. They dream of wealth and fun, and infuse their spelunking into a sweet-pop melodrama. The album boasts an array of studio and live backing talent, from jazz legend Charles Mingus (whose liquid-blues playing was a particular influence on this album) to Arlo Guthrie.

Hormonal therapy and late-stage prostate cancer: a review. Hormonal therapy is becoming more widely used and has shown encouraging results in the treatment of advanced prostate cancer. For patients with advanced prostate cancer who are not candidates for or have developed resistance to chemotherapy, hormonal therapy is the remaining treatment option. The introduction of the antiandrogen, flutamide, has produced a significant increase in survival in advanced prostate cancer patients. Recent studies demonstrate a survival advantage associated with the use of the luteinizing hormone-releasing hormone (LHRH) agonist, leuprolide, or the LHRH agonist-LHRH antagonist combination, leuprolide + bicalutamide. Furthermore, the addition of a thymidine kinase-type suicide gene to the combination of leuprolide + bicalutamide results in further improvement in progression

Thousands of miles away from their usual life and work in the north of England, FSU President Eric Barron and Florida State football Coach Willie Taggart have plenty of time to talk, especially on the subject of finding an offensive coordinator, the FSU offense in 2018 and more. Barron did so this week. Saturday, the sixth-year Florida State head coach sat down with Warchant.com and Senior Writers Josh Helmholdt and Kyle Snow, and spoke about a series of issues, including the team's offense, finding a new offensive coordinator, the legacy of Jimbo Fisher and more.

be applied for different environmental conditions, and this in turn requires a different mix of herbicides. A good example would be noxious weed control on agricultural lands in Europe (e.g. oat, *Vigna* spp., poppy and oilseed rape). Another challenge is the cultivation of major crops on agroforestry systems, where GR crops are mixed with other perennial GR crops. These crop rotations may be similar to the traditional concept of intercropping, which has been shown to increase the diversity, stability and productivity of agroforestry systems

\\[@B39-plants-02-00138]. 5. Conclusions ===== Several factors were found to affect the performance of agronomic and weed control on GR plantations, such as the mix of GR, tree/ground vegetation density and the density of herbicide application. Future studies will need to pay attention to better characterize how many different weed species coexist in those systems, especially during different growth and harvest times, and how they respond to each different application protocol. The author would like to thank the technical staff at the University of Michigan Experiment Station, and especially Susan Kruger for help with all the technical work and for providing plant material. The author declares no conflict of interest.

In the early 1900s, word got out that ouroubours, the king of the Earthworm - "Oom bours" - was on the loose. It was such a mysterious and exotic beast that in 1913, the New York Times published an article on the "strange King of the Earthworm" who could eat "anything that he pleases," had a "long, bushy tail," and still had large, bright eyes. A few years later, John Deehan, an amateur entomologist in Florida, reported that he
