AutoCAD is available as a standalone app or as part of AutoCAD 360, which is a combination package of both AutoCAD and AutoCAD LT (used for Windows). However, not all features of AutoCAD are available in AutoCAD LT. History of AutoCAD AutoCAD was developed in 1982 by Thomas P. Stafford, Jr., of the University of Utah Department of Civil Engineering. The original name of the product was MicroStation. MicroStation was a general purpose CAD program that was created and marketed by the Autodesk group in San Rafael, California. Stafford was able to obtain a contract to create the program for the National Center for Atmospheric Research (NCAR). In 1981, Stafford's employer, the University of Utah, introduced a new computer system, the HPC 10 (originally known as the HP110). HPC 10 supported a new graphics controller, HPGL, that allowed engineers to develop and run CAD programs locally, without having to use a graphics terminal on a mainframe or minicomputer. Stafford was able to develop a demo version of MicroStation on the HPC 10, which was shown to the new NCAR president, Bob Nelson. Nelson liked the program and agreed to license it to Autodesk as MicroStation, to be marketed as part of the NCAR's MicroStation product line. In 1981, Stafford's department at the University of Utah received a contract for a CAD program to be used by the U.S. Geological Survey to generate maps for the agency's various projects. The new program was to be called "AutoCAD", for Auto-Cad-Drafter, and was to be marketed as an extension to a combined package known as "AutoCAD LT". Stafford met with Autodesk CEO Steven Sasson in 1982 and the initial concept for AutoCAD was developed. Stafford was paid \$10,000 for the initial work on AutoCAD. The first AutoCAD was created in 1982 for use on the NCAR HPC 10 and released for sale in December of that year. It was an entirely manual app, with no user interface. It could only work on NCAR's new HPGL graphics controller and could not be installed on a PC. The only way to run it on a PC was to enter the command line and type in the executable file from a floppy disk. In 1983, the Autodesk group showed the AutoCAD product to

Relationship management In the 90s, when several persons had a single drawing, it was possible to use the "Record" and "Copy" commands to automate the drawing-creation process. Then the "Relationships" command was introduced to manage entities of drawings. In AutoCAD 2010, the "Relationship Manager" dialog box appears when a relationship record is selected. The user can modify the name and attributes of a drawing relationship. The "Record" and "Copy" commands are now just part of the relationship commands menu. A drawing relationship can be a between two drawings or a one-to-many, one-to-one, or many-to-many relationship. In AutoCAD 2010, a relationship can be related to any entity, including blocks, layers, shapes, text styles, dimensions, and other things. AutoCAD's relationship manager allows the user to set the visibility for all drawing relationships in one click, and to hide all relationships that have no drawings. Some recent AutoCAD releases also include the ability to create custom relationship types that are used for tagging other drawings and other entities. This allows the user to "relate" two objects together. Collaboration tools AutoCAD 2011 added the ability for a drawing to be a container for other drawings. The user can then copy drawings from the container and use them as separate drawings. With the drawing extensions that AutoCAD 2012 and later offers, you can see multiple drawings at the same time. You can also switch between them, so you can work on a drawing while the others are visible in the preview window. The drawing extensions are available for Windows only. The drawing extensions also give you the ability to create workspaces that use a combination of drawings and/or plugins. Communication with AutoCAD is made possible by the AutoCAD Exchange (AeX) software. It allows one to design drawings in AutoCAD, send and receive drawings and models to other users of the AutoCAD software, collaborate over the Internet, and communicate in the cloud. AeX integrates with other software packages such as AutoCAD LT, Excel and SharePoint. Other users of AutoCAD can view, view and edit drawings sent to them by the AeX software. It is possible to view
